Castle Windows Has Solutions To Common Window Complaints

By [replacement windows new jersey](#)

Castle Windows of NJ says the #1 complaint they hear from homeowners this time of year is of drafty windows leaking in cold air. Replacing these worn out windows with vinyl windows can eliminate this problem as well as put some extra cash back in consumers' wallets.

Castle "The Window People" recommends ENERGY STAR® qualified products which use less energy than conventional products and offer superior performance against winter weather and even summer storms.

Castle Windows explains that vinyl windows are specially designed for energy efficient, weather-tight performance - even in the worst weather conditions. According to Rod Arce, one of three owners of Castle Windows, "Vinyl windows are designed with an advanced interlock system and weather-stripping to provide superior performance against cold winter winds and summer storms. When properly installed, these windows eliminate drafts and leaks in even the roughest of weather."

Many NJ homeowners have already experienced the benefits of ENERGY STAR windows from Castle "The Window People" including Lori M. who recently installed new windows in her River Vale home. "I can already feel the energy savings. I used to have a 5 to 7 degree difference between the front and back of the house, now the temperature is negligible."

Similarly, Robyn and Howie G. of Marlboro also realized improved weather resistance with the installation of their new windows and said, "We have battled with temperature control in our daughter's room, which is over the garage, since we purchased the house. After insulating the garage attic, the installation of Castle Windows was a major and final step to solve the problem."
